Primary Knee Solutions

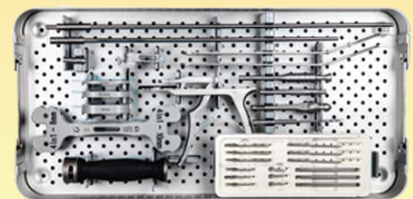

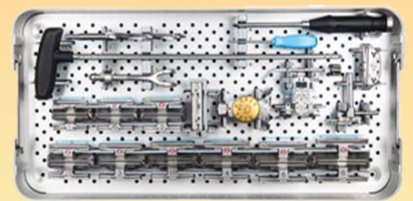

A3GT

A3GT total knee system has been on the market since 2016. It boasts a large range of sizes for best anatomical fit; a soft tissue friendly, high flex femoral component and anatomic polished tibia; Intuitive and innovative instrumentation 3 tray system for all knee variations. Available in CR, AS and PS.

Engineered for anterior, posterior, or mixed referencing with accurate rotational alignment from the anatomic tibial component.

Supports both mechanical and anatomic alignment while ensuring excellent cortical fit and kinematic balance.

Revision Knee Solutions

ACCK Revision Knee System

a versatile, user-friendly system compatible with the A3GT platform, offering extensive modular options to manage instability and bone loss in revision cases. Equally suitable for complex primary knees, it is designed to address collateral ligament deficiency and deformities without bone loss extending beyond the epicondylar axis or tibial tubercle.

AHK

THIRD-GENERATION ROTATION HINGE KNEE

An advanced evolution of the proven A3 Knee System, designed for high function, bone preservation, and optimal stability. It features refined hinge mechanics, rotating platform articulation, and a soft-tissue-friendly patello-femoral design for smooth motion and patient comfort. Fully compatible with A3GT and AMRS systems, it provides seamless modularity and revision versatility.
